# FieldVault

SECURE OFFLINE NOTEBOOK

# Your site notes, locked down and in your pocket.

FieldVault is a private notebook for security and engineering work. Survey notes, IP lists, configs, photos and tasks stay encrypted on your phone, with no internet connection and no cloud account.

`0 network access` `AES-256 encryption` `Biometric unlock` `Android 7+`

## SECURITY BUILT IN

### Fully offline

The app has no internet permission at all. Nothing syncs, uploads or phones home. Data only leaves when you export it.

### Encrypted at rest

Pages, pictures and backups are sealed with AES-256-GCM. Keys come from your password via 600,000 rounds of PBKDF2.

### Fingerprint unlock

Open with your fingerprint or face. The password is held by the phone's secure hardware and resets if biometrics change.

### Auto-lock and lockout

Locks when you leave the app or go idle. Repeated wrong passwords trigger a growing wait before the next attempt.

### No shoulder surfing

Screenshots and the recent-apps preview are blocked, the keyboard won't learn what you type, and copied passwords clear after a minute.

### One-tap erase

Wipe every page, picture, daily copy and fingerprint key on the phone in one step, confirmed by typing ERASE.

## MADE FOR THE JOB

### One app for every site visit

- Survey and fault notes
- IP and host lists
- Config and command snippets
- Tasks with due dates
- Camera photos in notes
- Tables and checklists
- Bookmarks and links
- Templates you reuse

### At a glance

| | |
|---|---|
| Storage | On the phone only |
| Encryption | AES-256-GCM |
| Key derivation | PBKDF2-SHA256, 600k |
| Backups | Encrypted, share or Downloads |
| Desktop | Exports open in any browser |
| Requires | Android 7.0 or newer |

**Get FieldVault**
github.com/Rikkicmd/Field-Vault

Download `FieldVault.apk` on your phone and allow installs when Android asks. No account, no subscription, no tracking. Your notes stay `yours`.
